

Windows version installation and quick run guide

OPERA 2.1

# Download the installer from “Releases”

The screenshot shows the GitHub interface for the repository **NIEHS / OPERA**, which is a fork of **kmansouri/OPERA**. The top navigation bar includes a search bar and links for Pull requests, Issues, Marketplace, and Explore. Below the repository name, there are tabs for Code, Pull requests (0), Projects (0), Wiki, Insights, and Settings. The **Releases** tab is selected, showing a list of releases. The latest release is **OPERA 2.0 Windows**, released 27 days ago by **kmansouri**. It has 2 commits to master since this release. The release is marked as a "Latest release" and "Verified". The release details show the version **v2.0-beta7.-windo...** and the commit hash **5512941**. Under the **Assets** section, there are four items: **OPERA2.0\_win\_offline.zip**, **OPERA2.0\_win\_web.zip**, **Source code (zip)**, and **Source code (tar.gz)**.

- **OPERA2.0\_win\_web.zip**: the installer will automatically download all dependencies. If Matlab runtime is already installed, it will just deploy the app.
- **OPERA2.0\_win\_offline.zip**: the installer is self-contained with all dependencies. No internet connection required during installation.

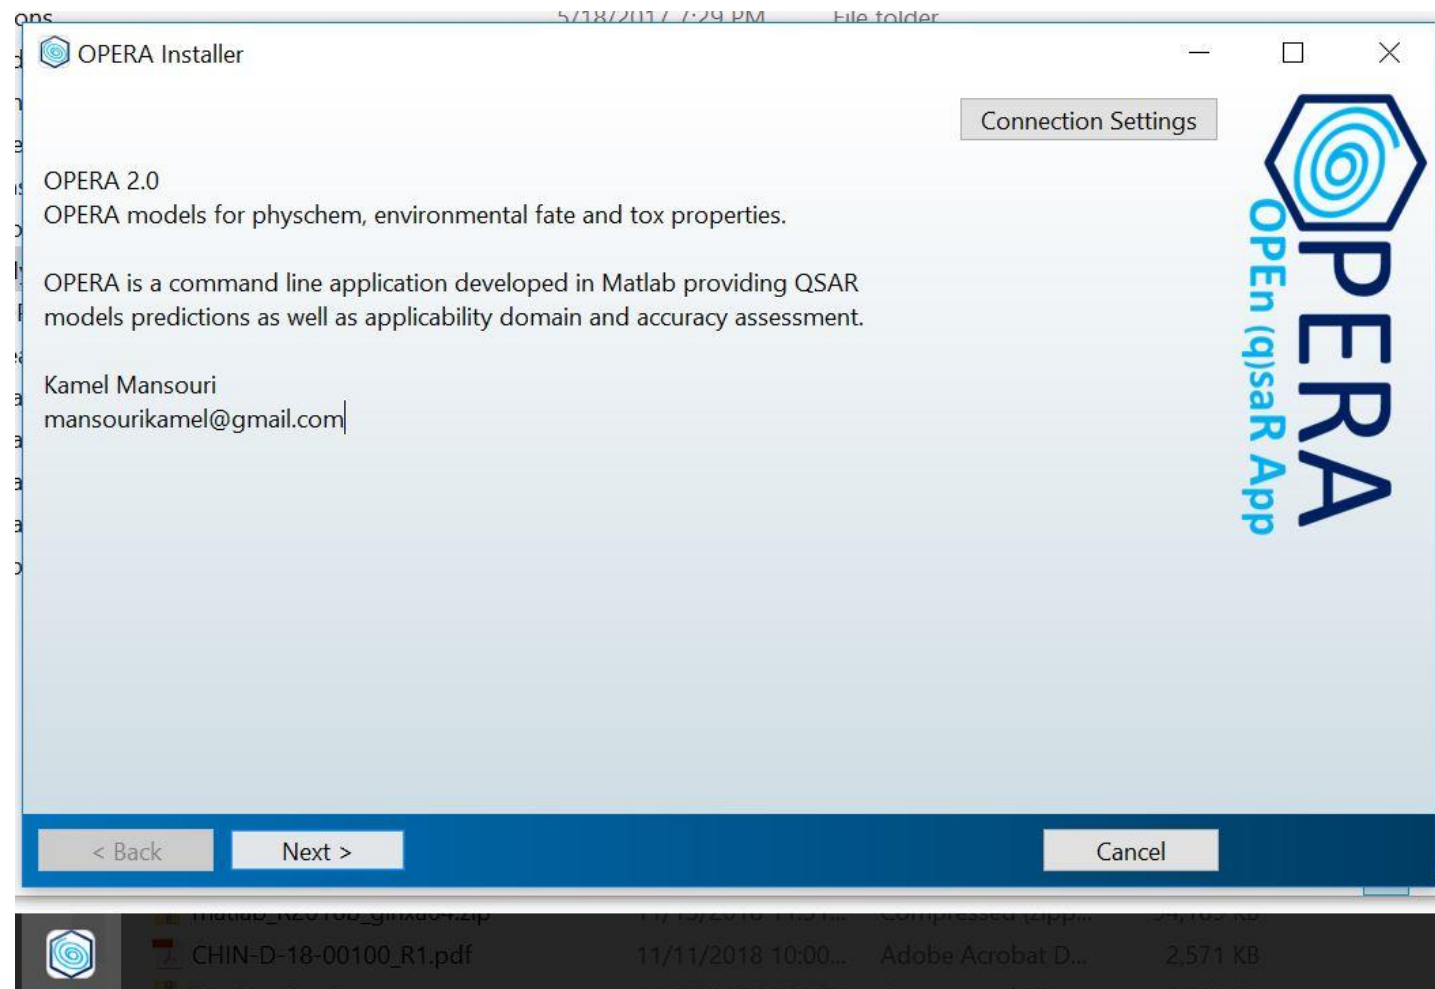

# Unzip and run OPERA\_Installer as administrator

# The installer will unpack and initialize quickly

# First intro to OPERA2, click next when ready

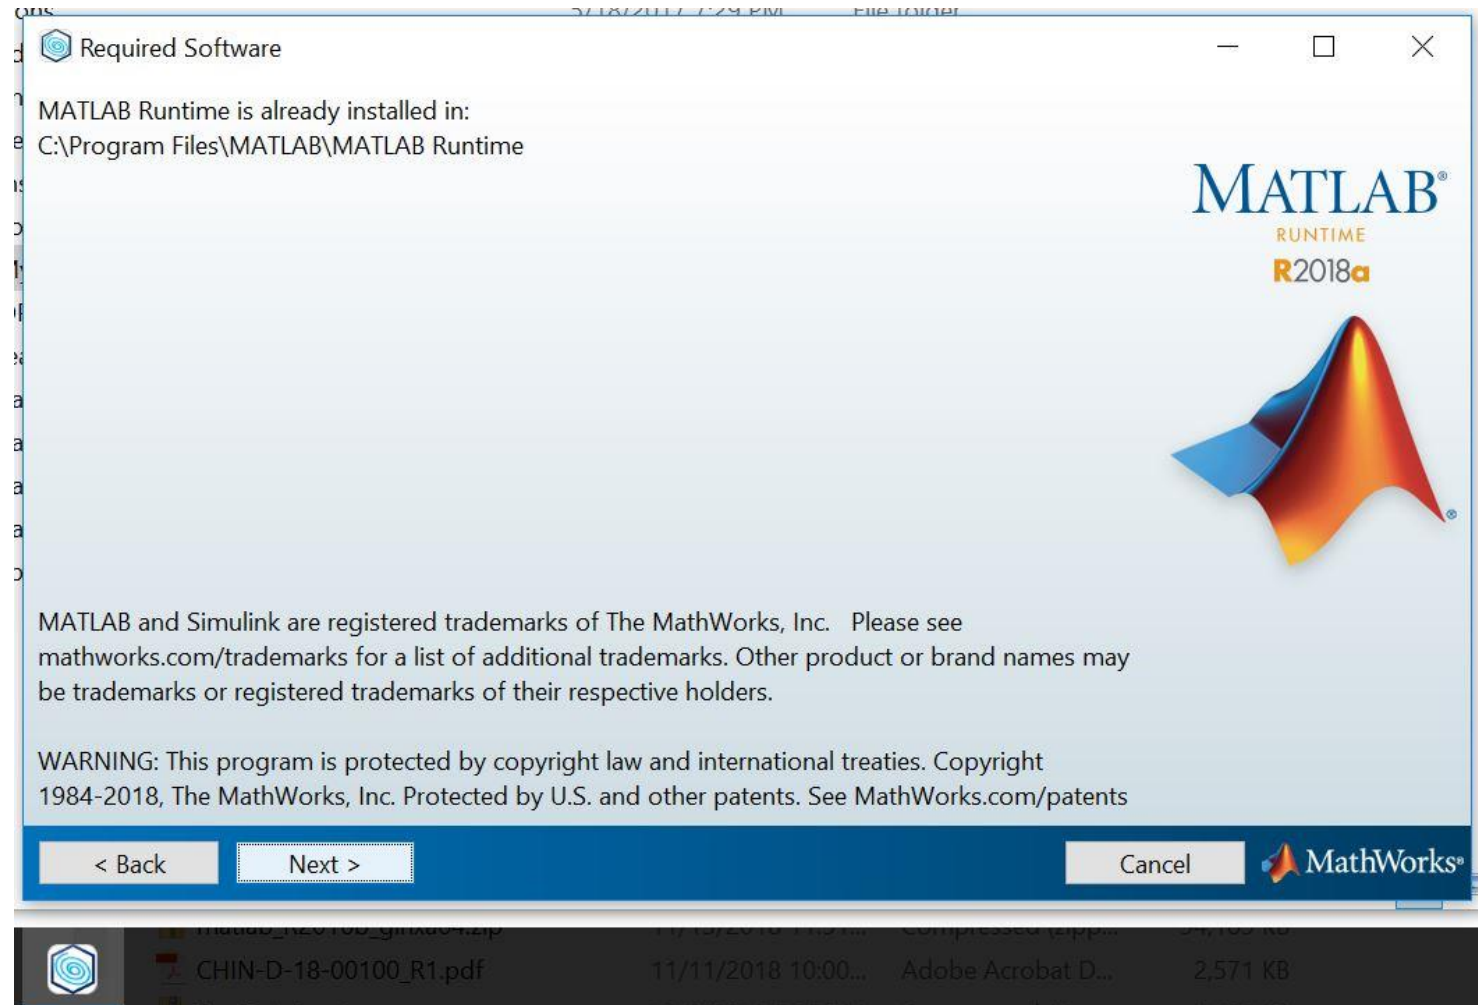

# Recommended install options.

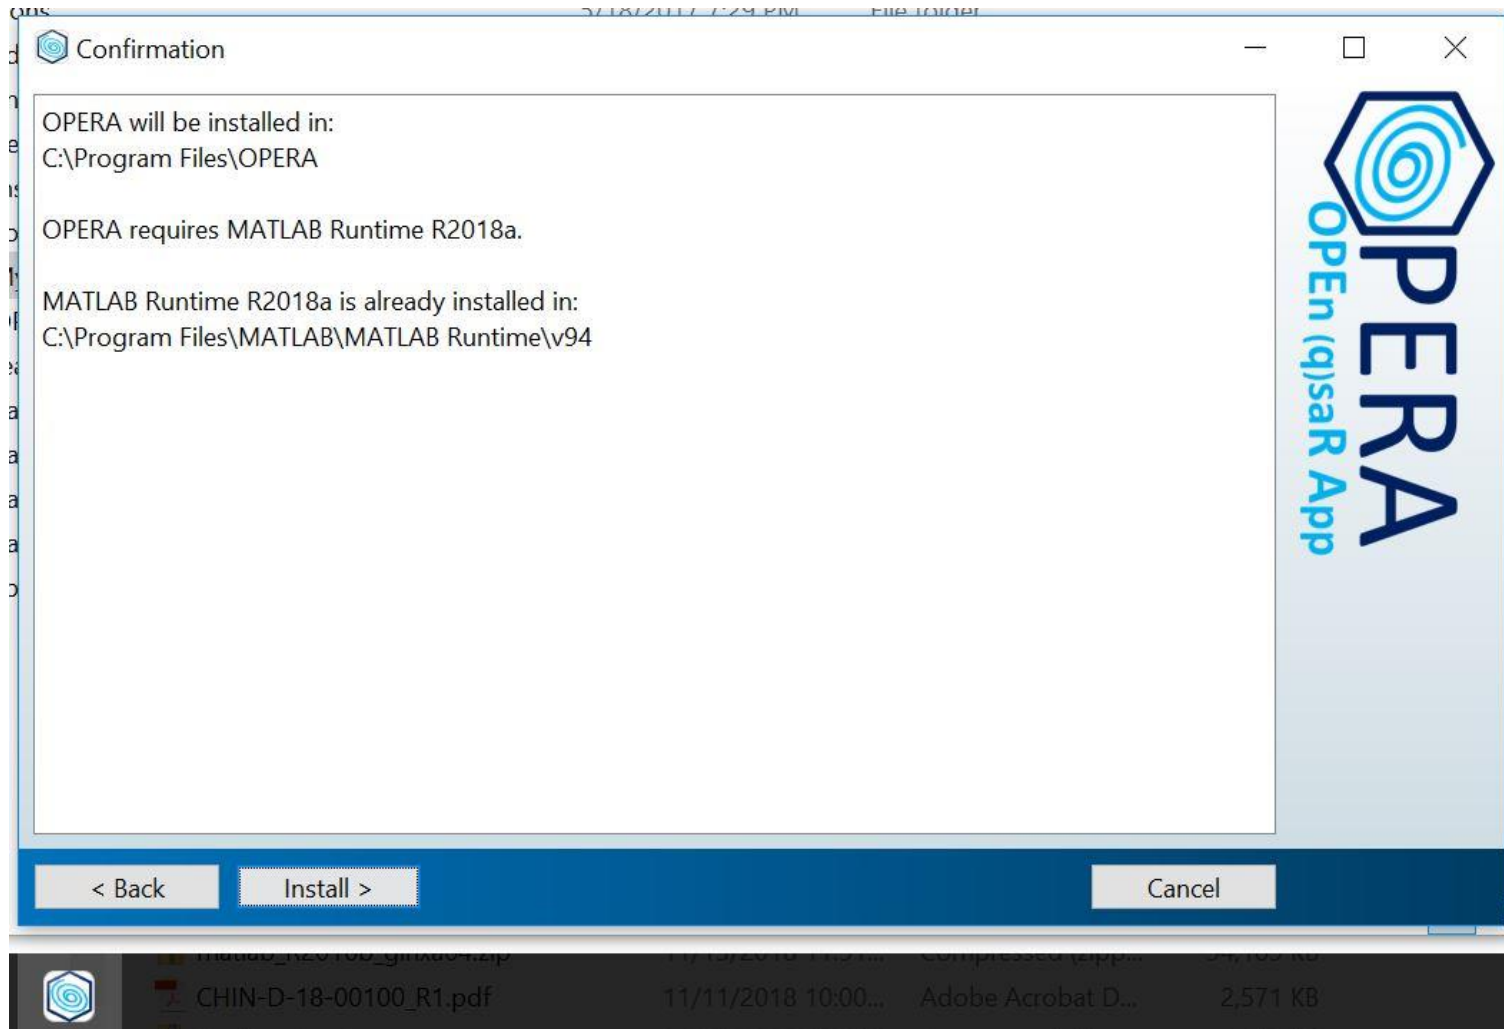

It is important to

- Keep the recommended installation folder
- No need to create the shortcut at this step. It will be created later.

# Just click next

# Confirm and install.

Wait while downloading and/or installing the runtime. (next time will go faster)

# That's it! IT's OPERAtional.

# Installed files

# Now copy that shortcut to your desktop.

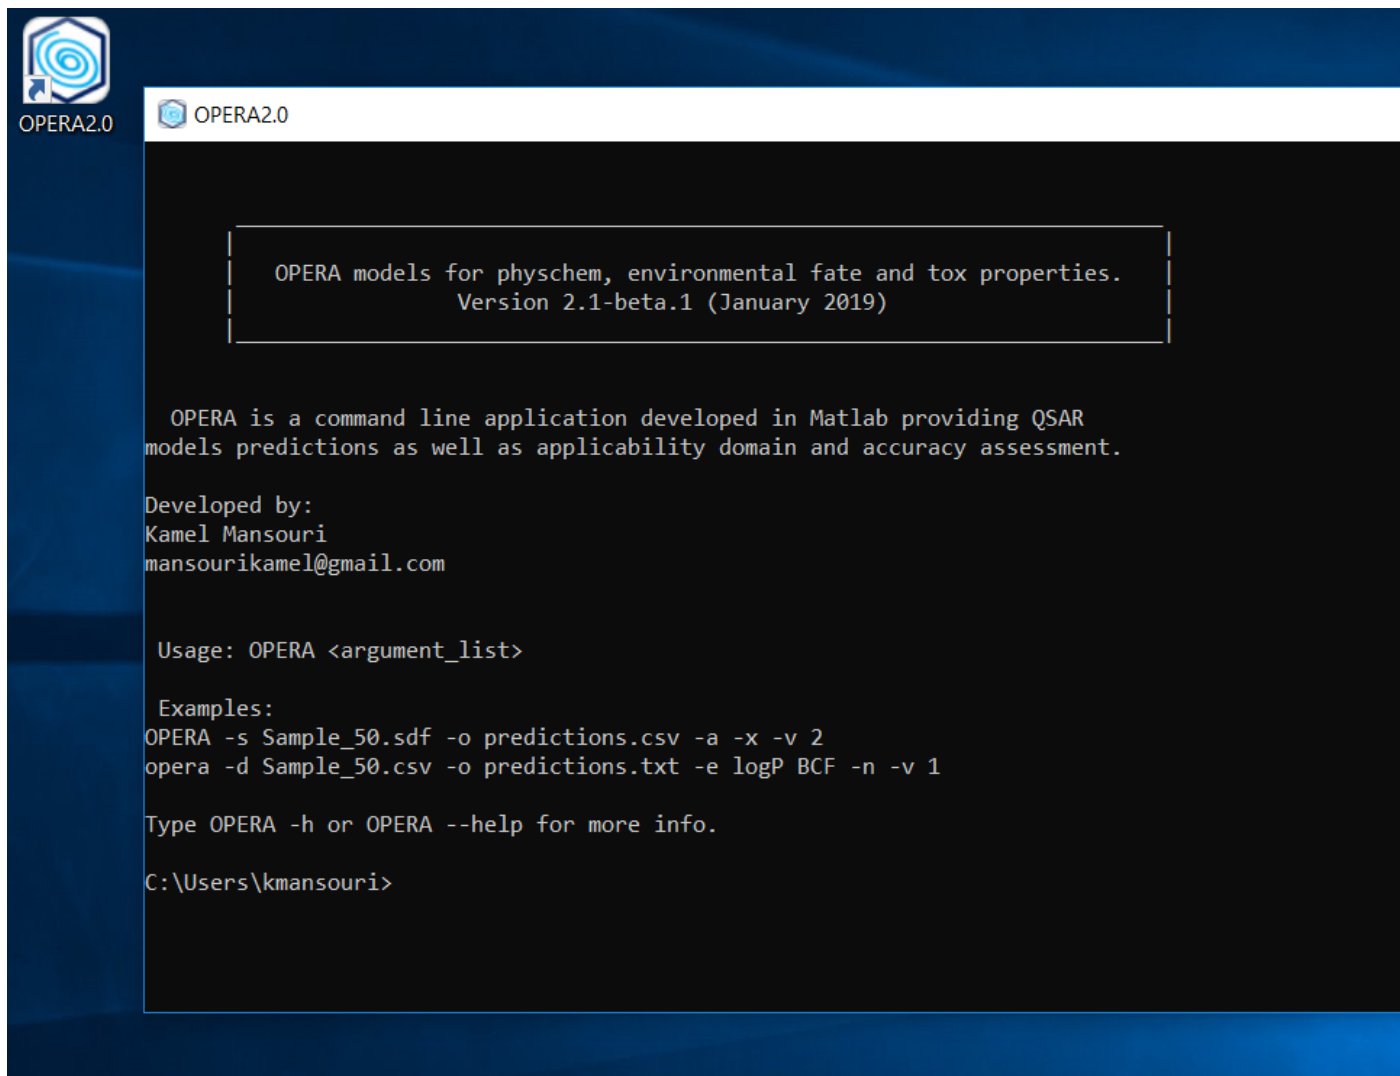

It will setup your environment variable and run the application in command line.

Double click the shortcut to run the app

# Ready to run the models

The screenshot shows the OPERA2.0 application window. The title bar reads 'OPERA2.0'. The main content area has a dark background with white text. At the top left of the content area is the OPERA2.0 logo, which consists of a blue square with a white stylized 'O' inside. Below the logo, the text 'OPERA2.0' is displayed. The main text area contains the following information:

```
OPERA models for physchem, environmental fate and tox properties.  
Version 2.1-beta.1 (January 2019)
```

OPERA is a command line application developed in Matlab providing QSAR models predictions as well as applicability domain and accuracy assessment.

Developed by:  
Kamel Mansouri  
mansourikamel@gmail.com

Usage: OPERA <argument\_list>

Examples:  
OPERA -s Sample\_50.sdf -o predictions.csv -a -x -v 2  
opera -d Sample\_50.csv -o predictions.txt -e logP BCF -n -v 1

Type OPERA -h or OPERA --help for more info.

C:\Users\kmansouri>

# Change directory “cd” to your working folder (containing the structures to predict)

The screenshot shows a Windows File Explorer window on the left and a terminal window titled 'OPERA2.0' on the right. The File Explorer is displaying the 'Test' folder, which contains three files: 'Sample\_50.smi', 'Sample\_50\_PadelDesc.csv', and 'Sample\_50.sdf'. The terminal window displays the OPERA2.0 application's help text, which includes the version (2.1-beta.1), a description of the application, the developer's name and email, usage instructions, and examples of command-line usage. The terminal also shows the user navigating to the 'Test' folder using the 'cd' command.

```

```
OPERA models for physchem, environmental fate and tox properties.  
Version 2.1-beta.1 (January 2019)
```

OPERA is a command line application developed in Matlab providing QSAR models predictions as well as applicability domain and accuracy assessment. All models are built on curated data from public domain. Molecular descriptors are calculated using PaDEL and CDK software.

Usage: OPERA <input> <output> [Options]  
By default, all endpoints will be calculated.

Examples:

```
OPERA -s Sample_50.sdf -o predictions.csv -a -x -n -v 2  
opera -d Sample_50.csv -o predictions.txt -e logP BCF -v 1
```

Input:

-s, --SDF, --MOL, --SMI Structure file containing the molecule(s) to be predicted. IDs will be assigned if the file does not contain molecule names. Molecular descriptors will be calculated using PaDEL software.

-d, --Descriptors pre-calculated PaDEL descriptors in csv file. If the first column is not "Name" as the standard PaDEL output, molecule IDs will be assigned.

-m, --Mat, --ascii Matlab matrix or ascii file containing PaDEL descriptors.

-i, --MolID Molecule names in csv file.

-t, --SaltInfo Salt IDs to improve melting point predictions. List provided in Salts.xls

-l, --Labels Descriptor labels. Necessary if the descriptor file does not contain labels or contains more than the 1444 PaDEL 2D descriptors.

Output:

-o, --Output Output file containing the predictions, applicability domain and accuracy information. File extension could be csv or txt. The output will contain by default: Molecule ID, predicted value (pred), Applicability domain (AD), Similarity index (Sim\_index) and accuracy estimate (Conf\_index).

-n, --Neighbors Add 5 nearest neighbors from training set (CAS, InChIKeys, Observed and predicted values)

-O, --FullOutput Output file containing all prediction details and used descriptors in csv format.

-x, --Seperate Separate output file for each endpoint.

Miscellaneous:

-v, --Verbose Verbose level: 0=silent (default), 1=minimum details, 2=full details.

-a, --All All endpoints to be calculated (default).

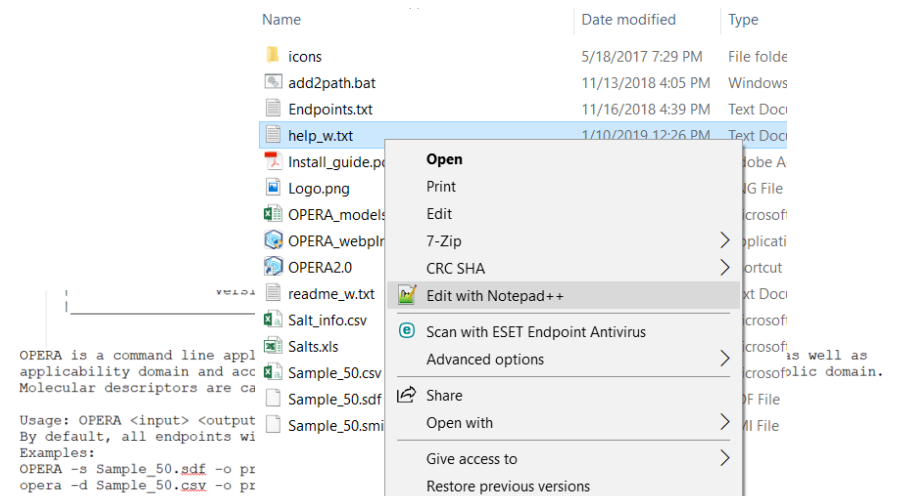

-c, --Clean Clean temporary files (generated during descriptor calculation.)

-logP, -BCF... List endpoints to be calculated (case insensitive). 'BCF'/'logBCF', 'BP', 'logP', 'MP', 'VP'/'logVP', 'WS', 'AOH', 'BioDeg', 'RB'/'ReadyBiodeg', 'HL'/'logHL', 'KM'/'logKM', 'KOA', 'Koc'/'logKoc', 'RT', 'pKa', 'logD', 'CERAPP'/'ER', 'CoMPARA'/'AR', 'CATMoS/AcuteTox'.  
Groups of Endpoints: 'StrP' (Structural properties), 'PC'/'Physchem', 'EnvFate'/'EF', 'Tox' (ER, AR, AcuteTox).

-e, --Endpoint List endpoints to be calculated.

-h, --Help Display this help file and exit.

-V, --Version Version of the application

OPERA is a command line application developed in Matlab providing QSAR models predictions as well as applicability domain and accuracy assessment. All models are built on curated data from public domain. Molecular descriptors are calculated using PaDEL and CDK software.

Usage: OPERA <input> <output> [Options]  
By default, all endpoints will be calculated.

Examples:

```
OPERA -s Sample_50.sdf -o pr  
opera -d Sample_50.csv -o pr
```

Input:

-s, --SDF, --MOL, --SMI Structure file containing the molecule(s) to be predicted. IDs will be assigned if the file does not contain molecule names. Molecular descriptors will be calculated using PaDEL software.

-d, --Descriptors pre-calculated PaDEL descriptors in csv file. If the first column is not "Name" as the standard PaDEL output, molecule IDs will be assigned.

-m, --Mat, --ascii Matlab matrix or ascii file containing PaDEL descriptors.

-i, --MolID Molecule names in csv file.

-t, --SaltInfo Salt IDs to improve melting point predictions. List provided in Salts.xls

# Examples:

Usage: OPERA <argument\_list>

General command: "OPERA <input> <output> <options> " no specific order for the arguments.

```
>opera -s Sample_50.sdf -o predictions.csv -logP -v 1
```

Using the sample sdf file (50 chemicals) to calculate logP only in minimum verbose mode (v=1). Endpoints names (only) are case insensitive.

```
>opera -s Sample_50.sdf -o predictions.csv
```

Simplest command specifying only the input and output. By default, OPERA will calculate all endpoints and output them to the same file in silent mode (V=0 by default).

```
>opera -d PadelDesc.csv -o predictions.csv -LOGP -BCF -v 2
```

Running one of the previous commands will generate the descriptor file "PadelDesc.csv" for this list of chemicals that you can use to run other models.

```
>opera -d PadelDesc.csv -o predictions.csv -physchem -v 2 -s Sample_50.sdf
```

This runs a list of models at the same time without running all of them. "physchem" or "pc" will run 10 models.

```
>opera -s Sample_50.smi -o predictions.csv -CATMoS -v 1
```

This will run CATMoS models only using "CATMoS" or "AcuteTox" (case insensitive).

```
>opera -s Sample_50.sdf -o predictions.csv -all -n -x -v 1 -c
```

This will run all models. "-n" to get the nearest neighbors and their experimental and predicted data. "-x" will output each one of them in a separate file. "-c" or "-clean" to delete generated descriptors afterwards.

```
>opera -s Sample_50.sdf -d PadelDesc.csv -o predictions.csv -Tox -n -x -v 1
```

This will run all toxicity endpoints including CERAPP (ER), CoMPARA (AR) and CATMoS (AcuteTox).

```

OPERA2.0
C:\Users\kmansouri\Documents\work\Test>opera -s Sample_50.sdf -o predictions.csv -v 1

All properties will be calculated:
General structural properties, Physchem, Env. fate and Tox Endpoints (CERAPP, CoMPARA and CATMoS)

===== Molecular Descriptors =====
PaDEL calculating 2D descriptors...
End of descriptors calculation: 50 molecules calculated.
PaDEL generating fingerprints...
End of fingerprint generation: 50 molecules calculated.
CDK 2.0 calculating 2D descriptors...
End of descriptors calculation: 50 molecules calculated.

===== Loading Input Files =====
Loading of PaDEL descriptors file...
The number of input molecules is: 50
Checking loaded variables.
The number of loaded PaDEL descriptors is: 1444
Loading of fingerprints file...
The number of loaded fingerprints bits is: 10145
Loading of CDK descriptors file...
The number of loaded CDK descriptors is: 286

===== Running The Models =====
Generating the general structural properties...
----- PhysChem properties -----
Predicting LogP values (Log10)...
Predicting MP values (Deg. C)...
Predicting BP values (Deg. C)...
Predicting LogVP values (Log10 mmHg)...
Predicting LogWS values (Log10 M)...
Predicting LogHL values (Log10 atm-m3/V)...
Predicting RT values (Mins)...
Predicting LogKOA values (Log10)...
Predicting pKa values (unitless)...
Predicting LogD values (Log10)...
----- Env. Fate Endpoints -----
Predicting LogOH values (Log10 cm3/molecule-sec)...
Predicting LogBCF values (Log10)...
Predicting Biodeg. half-life values (Log10 days)...
Predicting Ready-Biodegradability (Binary 0/1)...
Predicting LogKm half-life values (Log10 days)...
Predicting LogKoc values (Log10 L/Kg)...
----- Toxicity Endpoints -----
Predicting Estrogen Receptor Activity (CERAPP)...
Predicting Androgen Receptor Activity (CoMPARA)...
Predicting Acute Oral Tox. endpoints (CATMoS)...

===== End Of Calculation =====
50 molecules predicted

```

# Sample output:

In this example, all endpoints were predicted and the output is written in a single file “predictions.csv”.

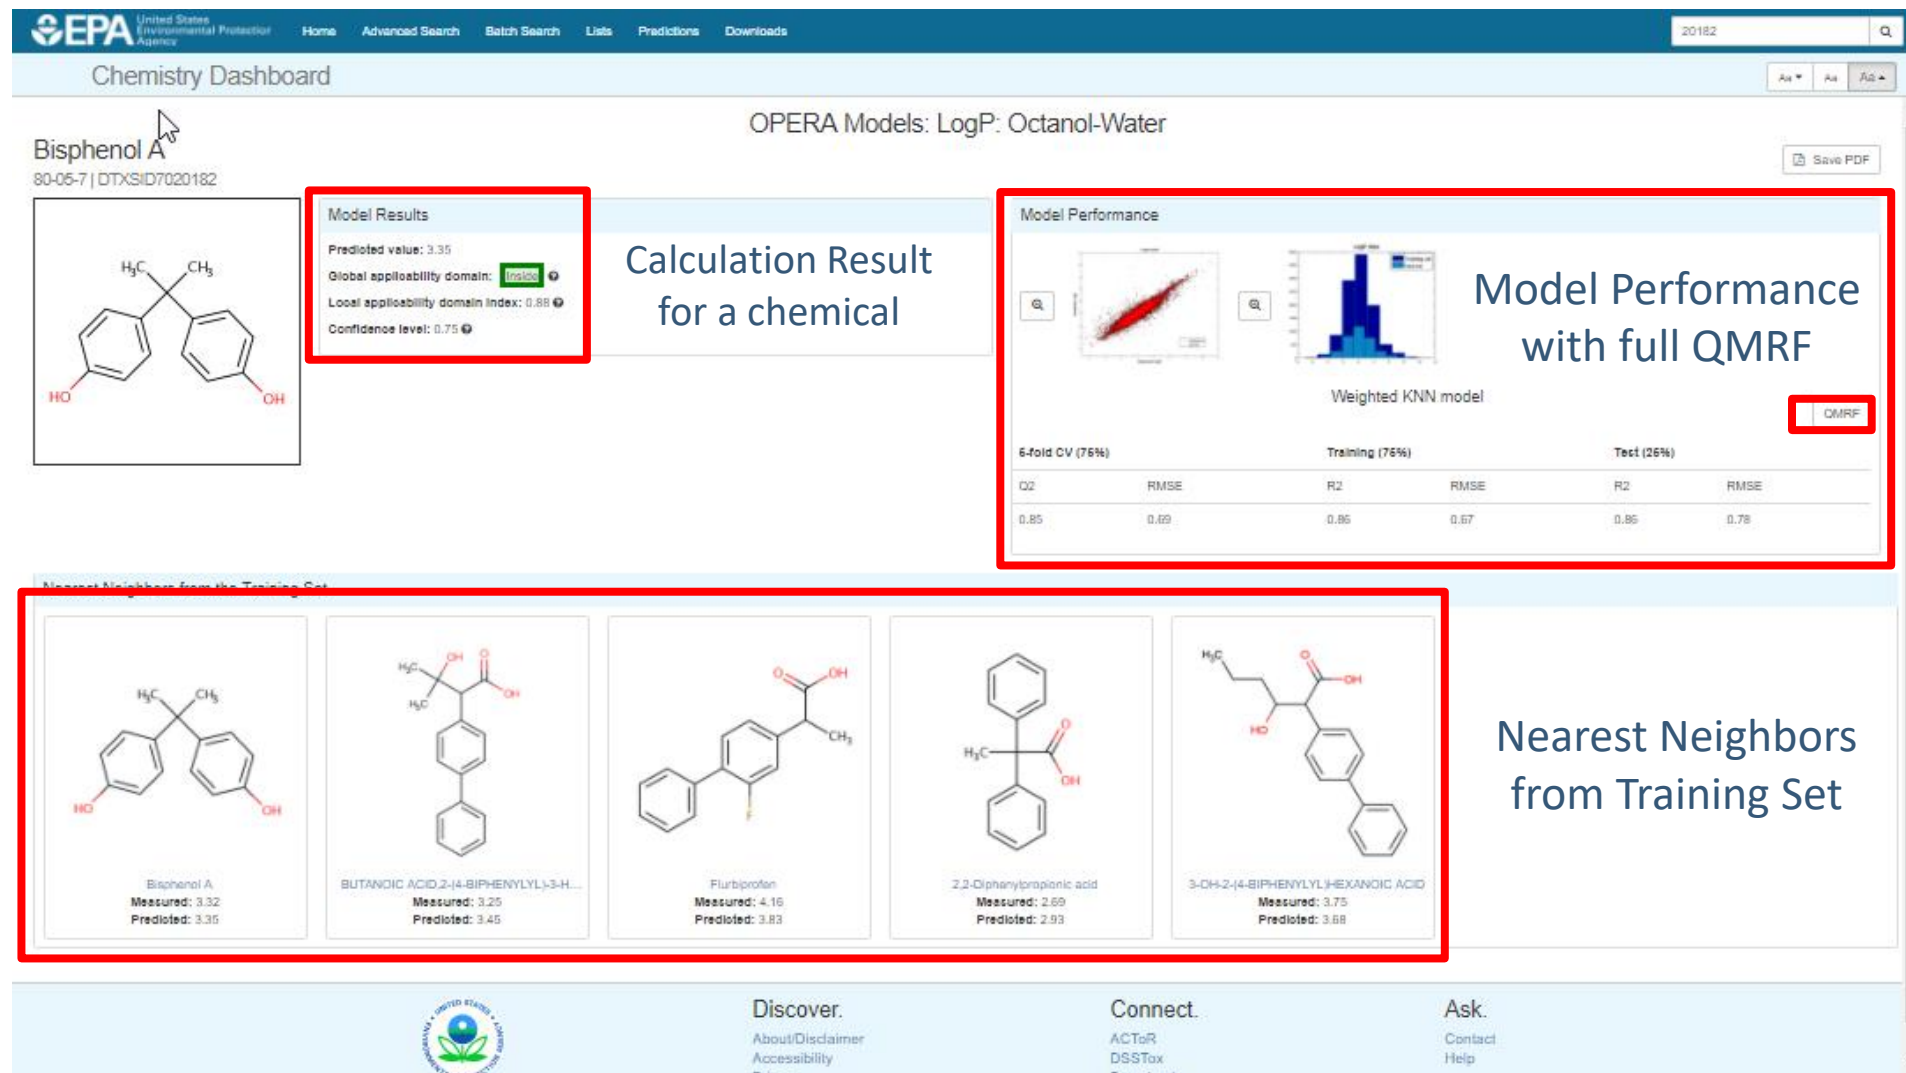

For each model, the predicted value is associated with applicability domain and accuracy estimates.

# OPERA prediction report on the EPA Dashboard

<https://comptox.epa.gov/dashboard>

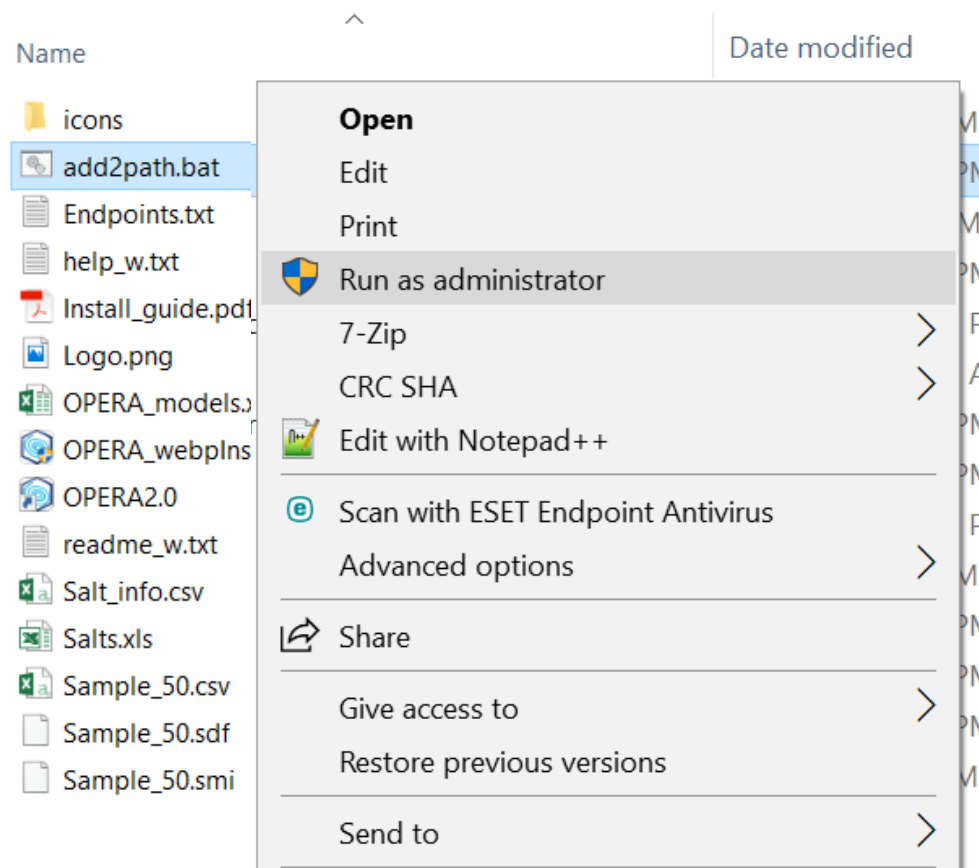

# Optional and only for expert users:

Run add2path.bat as admin to permanently edit system %PATH%.

Only needed to install for all users or to use in a pipeline/ workflow.

**Run only ONCE to avoid truncated path!**

Thank you!

Register on the GitHub repo for the updates  
<https://github.com/NIEHS/OPERA>

Your feedback will be appreciated!
